

Session Title:

Future Proof Your Clinical Trial: Harnessing the Power of Rave EDC and RTSM

Speaker:

Mark Gribman - Solution Consultant II, Medidata, Dassault Systèmes

Date: June 9, 2022

12:20 PM - 12:50 PM

Abstract:

The shift toward adaptive trials and shortening clinical development timelines are raising the stakes for companies trying to extract the most value from their technology investments. Considerations include: What building blocks are necessary to run a successful Decentralized Clinical Trial (DCT)? How do I ensure supply transparency to enable real-time decision-making? What can be done to improve the investigator experience and patient engagement? A single unified clinical platform streamlines data access, provides faster insights and improves decision-making. When trials undergo protocol amendments, it is necessary to adapt to achieve new levels of operational excellence.

During this session, you will learn how Medidata's unified platform enables:

- Improved data integrity and reduced risk
- Real-time clinical supply visibility and enhanced decision-making
- Rapid protocol amendments and system enhancements
- An improved investigator and patient experience
- Advanced analytics and supply forecasting
