

Rave CTMS - Comprehensive Trial Management Powered by Data

Optimized clinical trial operations is a key differentiator for delivering high quality treatments to patients, on time and on budget. Companies with robust processes and technologies for study start-up, monitoring oversight activities, risk management, and sound document management can quickly adjust to the complexity resulting from the ever-changing clinical trial development landscape. At the center of all these technologies is a dynamic, modern clinical trial management system (CTMS).

[Rave CTMS](#), unified on the Medidata Clinical Cloud®, is your transactional hub to natively and intelligently connect workflows, deliver data-driven insights, and foster collaboration - all powered by unified data capture.

CTMS Benefits

Centralized Insights and Risk-Based Analytics

- Transition from static numbers based on simple calculations to intelligent risk detection and actionable data
- Create both detailed and global views of study performance with powerful dashboards and reporting capabilities
- Best in Class Data Science to accelerate the delivery of actionable insights

Intelligent Workflow Automatio

- User-centric workflows where data is entered only once and used everywhere
- Data-driven issues are centrally identified, assigned, and remediated before they become problems
- Document management workflows, including startup, regulatory, and monitoring, which auto-populate key content and file automatically to the eTMF

End-to-End Process for Clinical Optimization

- Holistic and adaptable workflows from study startup through close out
- Unique capabilities to streamline patient, site, and sponsor/CRO engagement
- Powerful platform to enable a “one team” approach to clinical operations

Experience at Scale

- Medidata brings over 20 years of experience and over 3000 employees focused on life sciences R&D to transition you to new and innovative ways of working

CTMS Features

Digital oversight requires a broad set of focused workflows to support a holistic and adaptable approach to trial operations. Medidata’s fit-for-purpose CTMS modules are unified on a streamlined data architecture, where master data is entered once and used across all applications.

Dashboards enabling study-level monitoring, oversight, and analytical risk detection

Intuitive data visualization and exploration with Visual Analytics

Integrated milestone and document tracking for study startup

Monitoring workflows with document auto-filing to the eTMF

The Medidata Advantage

Medidata delivers digital technology solutions that support key processes from trial design through execution, seamlessly and natively connecting those capabilities. The Medidata Clinical Cloud platform supports intensive, real-time data collection from any source, allowing you to make the most of high-power analytics that enable you to execute an effective trial strategy.

Rave CTMS revolutionizes the sponsor/site relationship, both on-site and remotely, allowing the realization of both optimized trial design and early risk and issue detection, allowing your study teams to focus more of their time on patient care.
