

Phase I-II Multi-Site Trials

By combining our full suite of CRO support services and a network of strategic site partners globally, we manage complex multi-site trials in patients and healthy normal volunteers across a diverse range of therapeutic areas and trial designs.

Our Model

We prioritize sites that align with our principles to help our sponsors reach their milestones faster.

Site ID and Selection

Quality sites are imperative for a successful trial.

Prioritizing Site Payments

Sites require expedited payments to avoid study delays. This reinforces our collaborative, true partnership approach.

Site Engagement

We provide sites with essential tools, support and communication.

Multi-Site Study Designs

CNS, Psychiatry
& Neurology

Addiction &
Substance Use
Disorders (SUD)

Allergy &
Immunology

Cardiometabolic
& Obesity

Pain

Respiratory

Dermatology

Infectious
Diseases

Central Lab for Multi-Site Trials

Our Central Laboratory Services deliver flexibility, precision and speed, tailored to each study's unique requirements and reducing site burden.

Customizable Kits

Each kit is study, site and subject specific, using pre-printed labels to streamline operations and improve accuracy.

Rapid Turnaround

Next day results and responsive Turnaround Time (TAT) keeps studies moving forward efficiently and on schedule.

Real-Time Sample Stability

Shipments are monitored to ensure sample integrity from site to lab, with delays identified early and escalated promptly.

Florence Trial Operations Platform

The Florence Trial Operations Platform accelerates the study startup and enables seamless document distribution, tracking and remote monitoring across our sites. It provides real-time visibility and quality control, eliminating the need for back-and-forth exchanges and integrates directly with Trial Master Files (TMFs) for efficient filing and document updates. Whether sites use a Florence account or paper ISF, this tool keeps DVCR connected and informed—especially during critical phases such as startup and site activation.
